According to the HM Treasury, for an average employee on a £35,400 salary, cutting the rate of National Insurance by 2p would represent a tax cut of £450 a year. However, the Labour Party say that due to the decision to freeze salary thresholds (not change them with inflation) for both national insurance and income tax, the average household will still be worse off. Do you support or oppose the proposal to cut the headline rate of National Insurance by 2p?
